

**FLUOLITE**

COMPETENCE IN  
LIGHT & LUMINAIRES

LUMINAIRES  
**PRODUCT  
INFORMATION**

2023/24

We  
manufacture  
locally.

Since 1926.

## Fluolite Light & Luminaires – Luminaire production in Germany

We have been manufacturing “Made in Germany” luminaires since the 1950s. We promise you, our customers, consistently high product quality.

German and European production in accordance with ISO 9001 and ISO 14001.

Strict quality standards for materials, workmanship, technology and service.

Efficient delivery and procurement channels.

## Efficient use of resources – with respect for the environment

**We want to make our own contribution to improving sustainability:**

- Use of green electricity
- Efficient delivery and procurement channels
- Long lifetime of LED modules
- Replaceable LED modules
- Returning production waste to the production cycle

# Refurbishment and upgrades

## Phase-out of conventional light sources from 2023:

The EU has banned the delivery of T5 and T8 fluorescent lamps (among others) and will begin gradually enforcing this ban in 2023 (read more on this topic from page 108).

- ❶ Upgrading to LEDs means superior light quality in living and working spaces
- ❷ Ideal opportunity to upgrade to energy-efficient lighting
- ❸ Switching to LEDs will reduce your carbon footprint and sustainably reduce your operating costs
- ❹ LED luminaires are characterised by a longer lifetime, which results in longer maintenance intervals and further cost savings

## BEG subsidies for upgrades to existing lighting installations

Key points concerning subsidies for LED upgrades in buildings within the scope of the federal funding programme for efficient buildings (BEG subsidy) include:

<b>Object of the funding</b>	Energy-efficient lighting systems for interiors with high system luminous efficacy (min 120 lm/W; trunking min 140 lm/W) and high luminous flux maintenance (min L80 / 50,000 operating hours).
<b>Funding rate</b>	15 % of the investment volume including dismantling/assembly.
<b>Funding criteria</b>	Minimum investment volume: € 2,000 (gross); maximum subsidised investment volume: € 5 million per year per building.
<b>Eligibility criteria</b>	Non-profit organisations, companies, other legal entities under private law including housing cooperatives.

**Incidentally, almost all Fluolite luminaires meet the stringent technical requirements for BEG eligibility.**

**Ask our sales team about the Fluolite service concept for upgrades to existing lighting installations.**

product video on YouTube.

# PAC-D EL ML Multilumen

LED MOISTURE-PROOF LUMINAIRE WITH DIFFUSER

CE      

Luminaire housing made of glass-fibre-reinforced polyester, light grey, flame retardant. Diffuser made of UV-resistant PMMA (IK 03) or PC (IK 07). High-quality closures and multifunctional mounting brackets made from stainless steel (V2A) for rapid installation. Suitable for ceiling or wall mounting indoors and in covered outdoor areas.

- ▶ **ENEC and VDE certification marks**
- ▶ **Sustainable product thanks to replaceable LED module**
- ▶ **Luminous efficacy up to 168 Lm/W (eligible for BEG)**
- ▶ **Safe for use in the food industry – HACCP certified**
- ▶ **AC/DC capable**
- ▶ Long LED lifetime – 50,000 h for L80/B10
- ▶ Colour tolerance (initial MacAdam) 3
- ▶ Suitable for surface-mounting, trunking or suspended mounting
- ▶ Plastic closures optionally available
- ▶ -symbol, suitable for rooms with an elevated fire risk

## Installation options

## THE DIFFERENCES BETWEEN

## ACRYLIC (PMMA) AND POLYCARBONATE (PC)

**Acrylic (PMMA)**  
offers the following advantages:

- High resistance to weathering
- Very good UV resistance
- Excellent chemical resistance
- Resistant to greases, oils, acids and alkaline cleaners

**Polycarbonate (PC)**  
offers the following advantages:

- Excellent shock resistance
- Considerable breaking strength
- High thermal stability
- High rigidity

## Installation options

### CLICK

Simply click the lamp into the previously installed mounting brackets.

### CONNECT

The plug-in contact system lets you establish the electrical connection from the outside – without having to reach inside the luminaire.

### DONE!

Screw the protective plug in place over the connection to ensure that the higher IP 65 protection grade is maintained.

Compatible accessories see page 107

LED MOISTURE-PROOF LUMINAIRE WITH DIFFUSER

CE    IP65

## High Performance LED moisture-proof luminaire

Luminaire housing made of glass-fibre-reinforced polyester, light grey, flame retardant. PMMA diffuser, translucent opal, homogeneous illumination. High-quality closures made of stainless steel (V2A). Multifunctional stainless-steel mounting brackets for rapid installation (luminaire can be clipped in). Classic design for indoor or covered outdoor areas. Suitable for ceiling or wall mounting.

- Up to 12,600 lumens
- Versions with 6,500 Kelvin available
- Sustainable product thanks to replaceable LED module
- Luminous efficacy up to 158 Lm/W (eligible for BEG)
- Safe for use in the food industry – HACCP certified
- AC/DC capable

- Long LED lifetime – 50,000 h for L80/B10
- Colour tolerance (initial MacAdam) 3
- Homogeneous illumination
- Suitable for surface-mounting, trunking or suspended mounting
- Plastic closures optionally available
- -symbol, suitable for rooms with an elevated fire risk

Compatible accessories see page 107

## Installation options

Ceiling fixings with stainless-steel mounting brackets (included in the scope of delivery) let you easily clip the housing into position on the ceiling. It can also be suspended from a chain or cable using the enclosed bracket – this allows particularly easy mounting. The fixing span can be varied by 60 mm by means of sliding mounting brackets.

Variable fixing span due to clip-in mounting brackets with 60 mm adjustment range.

Suspended mounting from a chain or cable (not included) is possible using the supplied bracket and hanger.

## One series with numerous variants

Luminaire housing made of glass-fibre-reinforced polyester, light grey, flame retardant. Non-ageing, foamed PU seal. LED optical system mounted on white gear tray. Opal PC diffuser, impact resistant and UV-stabilised with internal longitudinal prisms. Multifunctional stainless-steel mounting brackets for rapid installation (luminaire can be clipped in). Suitable for ceiling or wall mounting. Approved for use indoors or in covered outdoor areas.

- High protection grade IP 66, high shock resistance to IK 07
- Sustainable product thanks to replaceable LED module
- Luminous efficacy up to 130 Lm/W (eligible for BEG)
- Safe for use in the food industry – HACCP certified
- AC/DC capable

- Long LED lifetime – 50,000 h for L80/B10
- Colour tolerance (initial MacAdam) 3
- Ambient temperature from –20°C to +35°C
- Versions with HF sensor, DALI or 3-hour emergency lighting available
- High-quality closures made of stainless steel, captive design
- -symbol, suitable for rooms with an elevated fire risk

• available ex stock

Luminaire housing made of white, glass-fibre-reinforced polyester, flame retardant. Opal acrylic diffuser (PMMA), smooth exterior, angular design. High-quality, circumferentially foamed, water-repellent seal made of polyurethane to ensure a higher protection grade. Internal closure device. Rear wiring channel for through-wiring. Suitable for ceiling or wall mounting. Approved for use indoors or in covered outdoor areas.

- Long LED lifetime – 50,000 h for L80/B10
- Colour tolerance (initial MacAdam) 3
- Non-ageing PU seal
- Halogen-free wiring

- Classic design with clean lines
- Sustainable product thanks to replaceable LED module
- Versions with HF sensor, DALI or 3-hour emergency lighting available
- Designed for use in harsh environments

## Luminaires for special applications

---

PAC-D AI

22 - 23

LZF HT

24 - 25

Various requirements with regard to chemical resistance, extreme ambient temperatures and high dust loads – as well as the challenging conditions in agricultural facilities and the food industry – demand the use of high-quality luminaires that are built to withstand punishment.

# Agriculture & Industry

High-quality luminaire for agriculture and industry – designed for professional use in damp, wet, dusty environments and areas exposed to ammonia. Advanced energy-efficient technology guarantees flicker-free, low-glare and homogeneous illumination.

Thanks to the high IP 69K protection grade, the luminaire is permanently protected against both the ingress of dust and jets of water with a max. temperature of 80°C and a max. jet pressure of 80 bar at a distance of > 10 cm.

Certified with the “D” symbol, the PAC-D AI luminaires are approved for use in operating sites that are liable to fire hazards. These include stables, barns, farms, facilities in the wood and paper industry, warehouses and storage rooms.

# PAC-D AI

LED MOISTURE-PROOF LUMINAIRE WITH DIFFUSER

CE     IP66 IP69K

- ▶ Meets all requirements for efficient and high-quality lighting for the promotion of animal welfare
- ▶ Sustainable product thanks to replaceable LED module
- ▶ Luminous efficacy up to 148 Lm/W (eligible for BEG)
- ▶ AC/DC capable
- ▶ Safe for use in the food industry – HACCP certified

## Extreme conditions – one luminaire

Luminaire housing made of glass-fibre-reinforced polyester, light grey, flame retardant. Opal acrylic diffuser (PMMA). High-quality closures made of stainless steel (V2A). Multifunctional stainless-steel mounting brackets for rapid installation (luminaire can be clipped in). Suitable for ceiling or wall mounting.

- ▶ Long LED lifetime – 50,000 h for L80/B10
- ▶ Colour tolerance (initial MacAdam) 3
- ▶ Ambient temperature from –20°C to +35°C
- ▶ Non-ageing PU seal
- ▶ Suitable for surface-mounting, trunking or suspended mounting
- ▶ Approved for use indoors and in protected and unprotected outdoor areas
- ▶ DLG certification is in progress

# High and low temperature

In the industrial sector, luminaires are largely selected on the basis of their light output. However, their lifetime also plays a particularly important role. This is determined to a large extent by the ambient temperature.

Our LZP HT LED moisture-proof luminaire is a powerful and robust luminaire for demanding requirements – including temperatures from  $-40^{\circ}\text{C}$  to  $+55^{\circ}\text{C}$ .

# LZP HT

## LED MOISTURE-PROOF LUMINAIRE WITH DIFFUSER

CE   IK07 IP66

Luminaire housing made of glass-fibre-reinforced polyester, light grey, flame retardant. Opal polycarbonate (PC) diffuser, impact-resistant and UV-stabilised with internal longitudinal prisms. Multifunctional stainless-steel mounting brackets for rapid installation (luminaire can be clipped in).

Suitable for mounting on walls, ceilings, trunking (e.g. TRA) or for suspended mounting in industry, parking areas, workshops, warehouses and assembly halls as well as cold stores, taking into account the temperature ranges.

- Ambient temperature from  $-40^{\circ}\text{C}$  to  $+55^{\circ}\text{C}$
- Sustainable product thanks to replaceable LED module
- Luminous efficacy up to 132 Lm/W (eligible for BEG)
- Safe for use in the food industry – HACCP certified
- Suitable for uncovered outdoor areas
- AC/DC capable

- Long LED lifetime – 50,000 h for L80/B10
- Colour tolerance (initial MacAdam) 3
- Non-ageing PU seal
- High-quality closures made of stainless steel, captive design
- -symbol, suitable for rooms with an elevated fire risk

# Surface-mounted luminaires

AOT 30

AOT Mini 31

Euro-Line 32

Euro-Line Mini 33

DeSpl 34

Quadra-P 35

LUX ML | LUX 36 - 37

We offer a wide range of high-quality surface-mounted luminaires that are suitable for diverse applications, including car parks, corridors, stairwells, containers and ancillary rooms as well as the retail food trade.

Luminaire housing made of white lacquered steel. Polycarbonate (PC) latch, white. Angular, smooth opal or prismatic acrylic diffuser (PMMA). Suitable for ceiling or wall mounting.

- Long LED lifetime – 50,000 h for L80/B10
- Colour tolerance (initial MacAdam) 3
- Foam profile seal
- Versatile due to different diffuser designs
- Optionally available with DALI

- Luminous efficacy up to 132 Lm/W (eligible for BEG)
- Sustainable product thanks to replaceable LED module
- Classic design with clean lines

# NEW LUX ML Multilumen

## LED LOUVRE CEILING-MOUNTED LUMINAIRE

### Glare-free, energy efficient, easy to install and durable

Sturdy housing made of steel, white, low-profile design. Double parabolic louvre in highly polished aluminium, reduces glare to provide optimal lighting for workstations with PC monitors – in offices and commercial or social spaces. Its high energy efficiency, ease of installation and durability make the LUX LED the perfect solution for new lighting installations and refurbishment projects.

- New: LUX LED now also with Multilumen function
- Unified Glare Rating (UGR) < 19
- Luminous efficacy up to 139 Lm/W (eligible for BEG)
- Simple 1:1 replacement for conventional surface-mounted luminaires

- Uniform light distribution in the room
- Long LED lifetime – 50,000 h for L80/B10
- LUX LED available with DALI

Our product range stands out thanks to its diversity. Our range of luminaires with modern designs and extremely homogeneous surface illumination also includes numerous variants equipped with cutting-edge technologies. The flexible nature of this luminaire series is underlined by its countless areas of use: living areas, stairwells, corridors, retirement and care centres, canteens, shops and shopping centres, etc.

# RKF | RKF ML Multilumen

## LED WALL AND CEILING LUMINAIRE

### IMPROVED TECHNOLOGY

**BRIGHTER** up to 4700 lumens  
**FLATTER** by up to 24 % compared to the RKL  
**STYLISHLY** understated design language

Luminaire housing made of powder-coated steel, white.  
 Domed diffuser made of opal, UV-resistant PMMA.  
 Plug terminal. Suitable for wall and ceiling mounting or  
 suspended mounting via 3-point cable suspension.

- Sustainable product thanks to replaceable LED module
- Luminous efficacy up to 132 Lm/W (eligible for BEG)
- Loop-through possible (2 cable entries)
- Practical bayonet closure
- AC/DC capable (RKF 4 ML)

- LED lifetime – 50,000 h for L80/B10
- Colour tolerance (initial MacAdam) 3

RKF-Z 2 | Ø 290 mm

RKF-Z 3 | Ø 360 mm

RKF-Z 4 | Ø 464 mm

### Multilumen technology

The luminaire can be operated at different light intensities.

### Eligible for BEG

The perfect solution for new installations and refurbishment projects.

## Increased flexibility thanks to our modular design concept

During development, our goal was to use as many common components as possible throughout this family of luminaires. Thanks to the practical standardised bayonet closure, the RKF(-Z) diffuser can be changed quickly and easily – even when mounted.

# STYLISH SHADES

## FOR WALL AND CEILING LUMINAIRES

Enhance your interior design with our new, stylishly modern shades for our RKF luminaire range. Discover our collection, choose from different materials, colours and sizes – all made in Germany.

As an aesthetic highlight, we can also implement custom requirements and create a shade that is perfectly adapted to your needs. For a unique lighting concept of the highest quality – from Fluolite.

### Diverse materials and numerous designs

Our carefully selected materials and colours offer a multitude of possible uses. Choose from various material and colour combinations for additional flexibility.

Our team will be happy to assist you with the selection and design of your shade.

### Tool-free installation

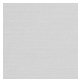

The shade's retaining ring is simply installed on the lower part of the luminaire.

The diffuser is then fixed in place using the bayonet closure. Finished!

# RKL 4 MC Multicolor

## LED WALL AND CEILING LUMINAIRE

### Switchable

Colour temperature 2700 K | 4400 K | 6500 K

The RKL 4 MC allows you to change the colour temperature by rewiring. Depending on the area and application, the luminaire can be set to warm white (2700 K), neutral white (4400 K) or daylight white (6500 K).

Luminaire housing made of steel, white. Domed diffuser made of textured acrylic (PMMA), translucent opal.

- ▶ **Variable colour temperature**
- ▶ **Major advantage – only one luminaire type is required for different light colours and applications**
- ▶ **Optionally available with DALI**
- ▶ Colour tolerance (initial MacAdam) 3
- ▶ RKL 4 HCL optionally available (control of luminous flux and colour temperature possible)

Type	Version	Colour temp. (K)	Luminous flux (Lm)	System power (W)	LED lifetime	Ø	H	Article No.

# RKL-Z | RKL-Z ML Multilumen

## LED WALL AND CEILING LUMINAIRE

### IMPROVED TECHNOLOGY

Luminaire housing made of steel, white. Flat cylindrical diffuser made of opal, UV-resistant PMMA. Suitable for wall and ceiling mounting. The diffuser is securely attached using spring clips. Plug terminal.

- ▶ Sustainable product thanks to replaceable LED module
- ▶ Luminous efficacy up to 142 Lm/W (eligible for BEG)
- ▶ AC/DC capable (RKL-Z 4 ML + RKL-Z 6 ML)

- ▶ Long LED lifetime – 50,000 h for L80/B10
- ▶ Colour tolerance (initial MacAdam) 3
- ▶ Loop-through possible (2 cable entries)
- ▶ Versions with HF sensor, DALI or 3-hour emergency lighting or AC/DC available
- ▶ Diffuser optionally available in UV-resistant PMMA or high-impact PC to IK 06

LED WALL AND CEILING LUMINAIRE

CE  IK02 IP65

- ▶ **High protection grade: IP 65**
- ▶ **Sustainable product thanks to replaceable LED module**
- ▶ **Luminous efficacy up to 125 Lm/W (eligible for BEG)**
- ▶ **Diffuser optionally available in UV-resistant PMMA or high-impact PC to IK 06**
- ▶ **Versions with HF sensor, DALI or 3-hour emergency lighting available**

Compact surface-mounted luminaire with high protection grade (IP 65), suitable for installation in humid environments. White luminaire housing made of polycarbonate (PC) with pressure compensation plug and two cable entries. Domed diffuser made of textured acrylic (PMMA), translucent opal. Secure and sturdy diffuser attachment thanks to internal closure device. Approved for use indoors or in covered outdoor areas.

- ▶ Long LED lifetime – 50,000 h for L80/B10
- ▶ Colour tolerance (initial MacAdam) 3

# Quadro-Lite

LED WALL AND CEILING LUMINAIRE

Compact universal surface-mounted luminaire with high protection grade (IP 65), suitable for installation in humid environments.

White luminaire housing made of polycarbonate (PC), flame retardant. Opal PMMA diffuser. Attractive design for use indoors or in covered outdoor areas.

- High protection grade: IP 65
- Sustainable product thanks to replaceable LED module
- Versions available as a house-number light with twilight switch
- AC/DC capable

- Luminous efficacy up to 122 Lm/W (eligible for BEG)
- Long LED lifetime – 50,000 h for L90/B10
- Colour tolerance (initial MacAdam) 3
- Ambient temperature from –30°C to +35°C
- Non-ageing rubber profile (EPDM)

FLAT-A ML 62 - 63

FLAT-A 64

FLAT-E 65

High-quality and efficient LED luminaires enable a perfect lighting solution for modern working environments. They are characterised by a high quality of light that promotes health, well-being and productivity.

# Modul Four

## LED LAY-IN LUMINAIRE

CE RoHS IK03 IP20

### High-grade lens technology. Elegant and variable luminaire design.

High-quality LED luminaire with visible lens optics. Sheet steel housing in RAL 9016 for installation in modular ceiling systems with visible trunking (module 625).

Can also be used as a surface-mounted or suspended luminaire with accessories. Efficient application with a high luminous efficacy and very good Unified Glare Rating for high-quality lighting solutions in offices and educational facilities.

- **Unified Glare Rating UGR < 19 or UGR < 16**
- **Luminous efficacy 130 Lm/W (eligible for BEG)**
- **DALI dimmable**
- Long LED lifetime – up to 50,000 h for L90/B10
- Colour tolerance (initial MacAdam) 3
- Including standard and Linect® quick connection system
- Various designs and module arrangements optionally possible

Type	Module	Version	Colour temp. (K)	Luminous flux (Lm)	System power (W)	LED lifetime	L	W	Article No.
Modul Four 2/4L	625 x 625	DALI	4000	5600	43	50,000 h L90/B10	621	621	8803 5000 •
Modul Four 1/8L	1250 x 312	DALI	4000	5600	43	50,000 h L90/B10	1246	308	8803 5300 •

• available ex stock

### Optionally available

- High glare reduction with UGR < 16 (< 5,000 lumens), especially suitable as lighting for technical-drawing offices
- Version with 3h emergency lighting
- With 3000 K, Tunable White and colour rendering index Ra > 90
- Possibility to integrate sensors
- Module arrangement in accordance with customer requirements

### Maximum flexibility in luminaire design

Examples of possible arrangements and/or orientations of the LED modules as well as the surface colour (black or white).

# Multilumen surface-mounted luminaire

## FLAT-A ML

Luminous efficacy up to 121 Lm/W.

Sustainable product thanks to individually replaceable accessories

Flexible cable feed at the rear

Unified Glare Rating for VDU and office workplaces: UGR < 19

Luminaire insert on long side

### Multilumen

- One luminaire, variable light intensity
- Easy storage, increased flexibility

# NEW FLAT-A ML Multilumen

## LED PANEL SURFACE-MOUNTED LUMINAIRE

CE IK06 IP40

- Sustainable product thanks to individually replaceable accessories
- Includes frame for surface mounting with perfect mitre joint
- Unified Glare Rating (UGR) < 19
- AC/DC capable

Efficient LED panel surface-mounted luminaire. Multilumen technology for adjustable light output (min/max), pre-set to maximum output upon delivery. Steel-frame housing, white.

Luminaire insert on long side. Microprismatic cover. Protection grade IP 40 on room side, IP 20 on ceiling side.

**The professional lighting solution for new buildings as well as refurbishment and conversion projects.**

- Luminous efficacy up to 121 Lm/W
- Long LED lifetime – 50,000 h for L80/B10
- Colour tolerance (initial MacAdam) 3
- Uniform light distribution
- Ambient temperature from –20°C to +40°C
- Flexible cable feed at the rear

## Downlights

---

ARO

69

LED downlights provide optimal ambient lighting in areas such as shops, corridors, surgeries, meeting rooms, hotels and foyers. Their compact design guarantees quick and easy installation.

NEW FROM  
AUTUMN 2023

---

**BODMAN DL**  
LED DOWNLIGHT

- ✦ Max. luminous efficacy > 120 Lm/W (eligible for BEG)
- ✦ Long LED lifetime – 50,000 h for L80/B10
- ✦ Unified Glare Rating (UGR) < 19
- ✦ Made in the EU

BLACK

WHITE

- ▶ Switchable colour temperature 3000 K, 4000 K, 5700 K
- ▶ Wide light distribution
- ▶ Flat design, shallow ceiling void

### Switchable colour temperature

LED recessed downlight in three different sizes and power ratings. The colour temperature can be changed by means of a switch on the luminaire. Depending on the area and application, you can choose between warm white, neutral white and daylight white before installation. Major advantage – only one luminaire type is required for different lighting moods.

Die-cast aluminium housing. Room side IP 54 (with closed ceiling). External LED driver is included.

- ▶ Dimmable with phase-cut dimmer
- ▶ Ambient temperature from -20°C to +45°C
- ▶ Protection class II
- ▶ Instant start
- ▶ Optionally available with DALI

TRX 72 – 74

TRX Lens 75

TRA 76 – 81

TRA click & connect 82 – 83

TRA Lens Plug & Play 84

Minilite 85

Trunking systems are typically used in warehouses, assembly and production facilities as well as in wholesale and retail outlets.

Our TRX trunking not only impresses due to its sophisticated rapid installation system that has proven itself over many years, but also thanks to its highly efficient LED light inserts with lens technology.

The Fluolite TRA trunking system is easy to use and can be customised with a variety of our light inserts and luminaires – up to IP 65 trunking. Our service team will be happy to advise you!

Easy.  
Faster.  
Tool-free.

## RAPID INSTALLATION SYSTEM FOR TRUNKING

Lighting installations must be economical, cost-effective and state of the art.

During its development, particular emphasis was placed on tool-free installation that can be completed in a very short time.

- 1 Choice of mounting: ceiling mounting or suspension with chain or rope.
- 2 Clip the rail into the hanger (max. fixing span 3 m).
- 3 The electrical connection to the starter element is established without tools, the trunking can then be installed while under voltage.
- 4 Push the middle/end element of the trunking into the end of the starter element and lock it. This creates the electrical and mechanical connection.
- 5 The light unit and the electrical contact are specified.
- 6 The TRX LED light unit is secured in position by clipping it into the rail.

The TRX trunking system can be installed quickly and easy without tools. This saves you time and thus ensures economical installation. The through-wiring is permanently integrated in the trunking.

The rapid installation system for TRX trunking is a universal lighting solution for warehouses, high-bay warehouses, production areas and workshops.

### TRX trunking

The TRX trunking system is based on a trunking rail made of profiled steel that is painted white on the outside and is available in three lengths. The trunking is equipped with 5 x 2.5 mm<sup>2</sup> or 7 x 2.5 mm<sup>2</sup> through-wiring as standard. The individual rails can be mounted very quickly and easily without tools thanks to the integrated connecting elements.

# TRX Lens Plug & Play

## LED TRUNKING INSERT

- Professional lighting solutions for warehouses, production halls and workshops, exhibition areas and shops.
- The Plug & Play system simplifies the installation process and thus considerably reduces the required effort.
- Optimum light control thanks to state-of-the-art lens technology for uniform light distribution.

## Linear design & the latest lens technology

The new TRX Lens light units allow quick and easy installation of new lighting projects or simple replacement of existing Fluolite TRX light units.

- Luminous efficacy up to 162 Lm/W (eligible for BEG)
- Ambient temperature from  $-20^{\circ}\text{C}$  to  $+35^{\circ}\text{C}$
- LED lifetime – 50,000 h for L80/B10
- Colour tolerance (initial MacAdam) 3
- Versions with DALI available

## TRX Lens trunking inserts

Consisting of white aluminium profiles. Fits on trunking with a length of 1530 mm.

TRX Lens trunking inserts can be used in 5-pin and 7-pin trunking.

Easy. Variable. Individual.  
TRA

## One trunking system. Many applications.

- Flexible trunking lengths
- Inserts can be freely positioned
- Fast installation
- Compatible with Fluolite moisture-proof luminaires
- Variable trunking system for surface mounting or suspended mounting of luminaires on cables or chains
- The perfect choice for diverse requirements, such as lighting solutions for production, industry and logistics facilities as well as sales areas

### TRA trunking

This trunking is made from a galvanised steel profile, painted white on the outside and available in two lengths. The individual rails can be mounted quickly, easily and without tools using the TRA rail connector.

Freely configurable trunking system with a low overall height. Variable trunking with freely selectable luminaire positions. Customised lighting solutions are possible thanks to quick and easy installation as well as variable cable routing in the wiring channel.

### Mounting options with the TRA trunking system

The empty trunking allows quick and flexible mounting of Fluolite moisture-proof luminaires. Using the appropriate mounting accessories (see page 77), each luminaire can be easily and variably mounted to create customised lighting solutions.

### Create a complete trunking system in a few simple steps

The TRA trunking system essentially consists of the following parts:

- 1 2 Trunking**  
The trunking (available in two lengths) is mounted directly to the ceiling or suspended from steel cables/chains using the trunking hanger.
- 3 Trunking connector**  
Connecting element for trunking. The connection is made without tools by simply plugging them together.
- 4 Trunking hanger**  
The trunking can be latched into the hangers without tools. In this way, many metres of trunking can be hung in a very short time.
- 5 Trunking protective caps**  
The plastic protective caps form the end of the trunking and are quickly installed by simply clicking them in to place.
- 6 Cover strip**  
The plastic cover strip can be used to close off any open areas in the underside of the trunking.
- 7 8 Luminaire fastener**  
Pre-install the luminaire fastener on the luminaire, then connect the luminaire to the trunking system. (Not necessary for TRA Lens).

# Whatever your application, TRA is the solution.

Here are some pointers to help you choose the ideal TRA trunking system for your requirements.

## Protection grade up to IP 66

Luminaires with a higher protection grade are less vulnerable to the ingress of moisture and dust. The protection grade IP 65 meets the requirements for humid environments.

- PAC-D EL TRA c+c
- PAC-D EL ML
- LZP EL
- ALSF
- Euro-Line Aqua

## Chemical resistance

Diffusers made of PMMA (acrylic glass) are highly resistant to weathering and UV radiation and also offer excellent chemical resistance. They are also resistant to greases, oils, acids and alkaline cleaning agents.

- PAC-D EL TRA c+c
- PAC-D EL ML
- PAC-D AI

## Dust, ammonia

In industrial and agricultural facilities with high dust loads or in applications with special cleaning requirements, additional factors must be considered when choosing a lighting solution.

- PAC-D AI

## Large mounting heights

To ensure an optimal working environment in assembly, manufacturing and production facilities, you need modern, high-quality luminaires that provide the perfect light wherever it is needed.

- PAC-D HP TRA c+c
- PAC-D HP
- PAC-D MaXX TRA c+c

**PAC-D MaXX TRA c+c**

## Optimised light distribution

Warehouses and storage racks consist of corridors with shelving areas that require adequate illumination. To optimise order picking through good lighting, uniform illumination of the vertical shelf surfaces must be ensured.

- PAC-D MaXX Focus TRA c+c
- PAC-D MaXX Focus

## High and low temperatures

For reliable lighting in ambient temperatures below  $-20^{\circ}\text{C}$  and above  $+25^{\circ}\text{C}$ , specially adapted LED luminaires are required.

- LZP HT

## Food industry

The EU regulation on food hygiene, which came into force in 2006, makes it compulsory for anyone handling or placing food on the market to establish an HACCP concept. Many of our luminaires that are compatible with the system are also HACCP certified.

- PAC-D EL TRA c+c
- PAC-D EL ML
- PAC-D AI
- LZP EL TRA c+c
- LZP EL
- LZP HT

## Supermarkets and shops

The TRA trunking offers maximum flexibility when positioning the luminaires, so each light can be mounted precisely where it is needed.

"CLICK & CONNECT" RAPID INSTALLATION SYSTEM FOR TRUNKING

## TRA CLICK & CONNECT

Click. Insert. Finished!

### Time-saving and tool-free trunking installation in just a few steps

The click & connect system is an extremely practical solution for the installation of trunking. It is suitable for luminaires with a higher protection grade, as well as other types. The connector system is located inside the trunking.

- ▶ Inexpensive alternative to conventional trunking systems
- ▶ Trunking for humid environments up to IP 65
- ▶ Flexible luminaire positions and customised trunking lengths

**TOOL-FREE**

**READY FOR CONNECTION**

The luminaires have been optimised for mounting on the TRA trunking and can be flexibly positioned. The luminaire connections are mounted on the rear of the housing and run invisibly inside the trunking. The luminaires themselves are interconnected via the click & connect plug-in system.

With the luminaires spaced approx. 1.5 m apart, no additional interconnecting cable is required for installation.

\*The cable length between the luminaire and the plug/socket is approx. 0.75 m. The entire luminaire installation process is tool-free.

**With "click & connect", a section of trunking can be mounted (click) and connected (connect) to the rail in next to no time.**

# TRA Lens Plug & Play

## LED TRUNKING INSERT

### Perfect lighting for industry and commerce

An optimal lighting installation that is suitable for use in both industry and retail must also meet all your requirements when it comes to lighting quality. The TRA Lens trunking system with lens system impresses thanks to extra-wide light distribution, which ensures the best possible illumination and thus optimum working conditions.

The freely selectable position of the luminaires in the TRA trunking system allows the lighting to be perfectly adapted to your requirements.

- ◆ Luminous efficacy up to 157 Lm/W (eligible for BEG)
- ◆ Pre-assembled for 5-pin through-wiring
- ◆ Tool-free and flexible assembly
- ◆ Various light-distribution angles optionally available
- ◆ AC/DC capable

- ◆ Long LED lifetime – 50,000 h for L80/B10
- ◆ Colour tolerance (initial MacAdam) 3
- ◆ Ambient temperature from –25 °C to +50 °C

### TRA Lens trunking inserts

## High-bay luminaires

---

PAC-D MaXX | 88  
PAC-D MaXX Focus

HiLu 89

To ensure safe and productive working conditions in assembly facilities, factories and warehouses, optimal lighting is essential.

Industrial buildings often have higher ceilings compared to standard rooms, which is why LED luminaires with a higher luminous flux and special beam types are often used in these facilities.

# PAC-D MaXX | PAC-D MaXX Focus

LED MOISTURE-PROOF LUMINAIRE WITH DIFFUSER

CE    IP65

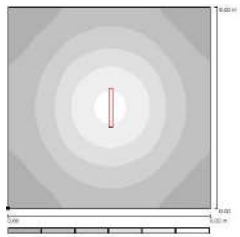

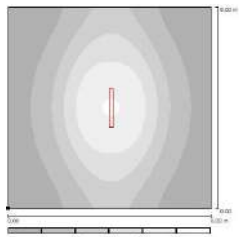

## LED luminaire for “HIGH” demands

The PAC-D MaXX is the perfect choice for rooms with high ceilings. Its strengths include a high luminous flux and excellent durability combined with an IP 65 protection grade. This makes this LED High Bay moisture-proof luminaire suitable for use under harsh operating conditions. Ideal for logistics and storage halls, industrial halls, exhibition halls as well as manufacturing and production facilities. Approved for use indoors and in covered outdoor areas.

Luminaire housing made of glass-fibre-reinforced polyester, light grey, flame retardant. PMMA diffuser, transparent, smooth outside, pearled inside. High-quality closures made of stainless steel (V2A).

- Up to 18,000 lumens
- Suitable for rooms and halls with high ceilings
- Homogeneous surface illumination, optimised light distribution
- Luminous efficacy up to 164 Lm/W (eligible for BEG)
- Sustainable product thanks to replaceable LED module
- AC/DC capable

- Long LED lifetime – 50,000 h for L80/B10
- Colour tolerance (initial MacAdam) 3
- Ambient temperature from –20°C to +35°C
- Plastic closures optionally available
-  symbol, suitable for rooms with an elevated fire risk

	PAC-D MaXX	PAC-D MaXX Focus
	Efficient and uniform illumination for high-ceilinged rooms and halls.	Powerful lighting solution with linear lenses, ideal for shelf systems and aisles.

# HiLu

## LED HIGH-BAY LUMINAIRE

CE  IK08 IP65

HiLu is a high-quality LED high-bay luminaire with integrated dimmable driver. The solid die-cast aluminium housing with integrated cooling fins offers superior thermal conductivity. Clear cover made of impact-resistant polycarbonate (PC). Includes suspension eye and connection cable (approx. 1 m). Mounting chain optionally available. Ideal for rooms with high ceilings, trade fair and exhibition halls, production facilities, warehouses, logistics centres.

- **Up to 26,000 lumens | 200 W | 130 lumens/watt**
- **Efficient illumination of rooms with high ceilings thanks to lens optics with wide beam types**
- **DALI dimmable**
- Long LED lifetime of 50,000 h
- Suitable for use in humid environments thanks to a high protection grade (IP 65)
- Ambient temperature from -30°C to +45°C
- Accurate colour rendering  $R_a > 80$
- Light distribution: 100°
- Wide spectrum with a luminous flux from 13,000 lumens up to 26,000 lumens
- Tool-free installation and maintenance

### Excellent thermal management

The ADC12 die-cast aluminium housing is moulded from a single piece and offers superior thermal conductivity. The aerodynamic cooling fins are arranged in a simple pattern and the surrounding convection holes make it easier for air to flow efficiently through the heat sink – **this all adds up to excellent thermal management.**

# Ball-proof luminaires

---

InAct

91

Standardised glare control, low reflections and certified ball-impact resistance provide a sound basis for compliance with diverse mechanical and lighting requirements. Perfect visibility is an essential aspect of creating the ideal conditions for training and competitions.

### Sleek. Economical. Sophisticated.

LED high-bay luminaire including power supply unit, dimmable. Steel housing, coated white. Microprismatic cover made of high-impact polycarbonate (PC), **ball-proof and robust**. This makes it particularly suitable for use in sports and multi-purpose halls.

The scope of delivery includes suspension eyes, connection cable (approx. 30 cm) with mounted connection plug and enclosed connection socket.

- ▶ **Powerful and ball-proof**
- ▶ **High protection grade IP 65, high shock resistance to IK 10**
- ▶ **DALI dimmable**
- ▶ **Luminous efficacy up to 125 Lm/W (eligible for BEG)**

- ▶ Ambient temperature from -15°C to +45°C
- ▶ Colour tolerance (initial MacAdam) 3
- ▶ Unified Glare Rating (UGR) < 22
- ▶ Diverse installation options
- ▶ Homogeneous light, accurate colour rendering, optimum glare control

## Reliable and safe thanks to automatic self-test

Single-accumulator emergency exit sign luminaire in “flat-screen” design, complies with EN 60598-2-22 (VDE 0711 Part 2.22), with auto-test function and built-in test switch for manual testing, including function display. Operating mode suitable for continuous and stand-by operation. This powerful rechargeable accumulator makes it possible to switch the light from 3 to 8 hours of accumulator operation if required. Suitable for wall and ceiling mounting. Suspended or bracket mounting on request. Includes four plug-in pictograms – escape route direction can be shown as required on 1 or 2 sides.

- Modern “flat screen” design
- Automatic test function
- Accumulator operation, switchable between 3 and 8 hours
- With powerful lithium iron phosphate (LiFePO<sub>4</sub>) accumulator
- Legible at up to 25 m

Housing: polycarbonate, white, impact resistant, shatterproof  
 Profile: anodised aluminium  
 Legible at up to: 25 m  
 Labelling: two-sided  
 Autonomy: switchable from 3 hours to 8 hours  
 Power source: LiFePO accumulator 3.2 V / 1.6 Ah

- ▶ Automatic test function
- ▶ Accumulator operation, switchable between 3 and 8 hours

Single-accumulator emergency exit sign luminaire, complies with EN 60598-2-22 (VDE 0711 Part 2.22), with auto-test function and built-in test switch for manual testing. Signalling via multi-coloured LED. Operating mode suitable for continuous and stand-by operation. This powerful rechargeable accumulator makes it possible to switch the light from 3 to 8 hours of accumulator operation if required. Suitable for wall and ceiling mounting. Includes pictogram films.

Housing: anodised aluminium, rounded  
 Diffuser / cover: polycarbonate, opal, impact resistant, shatterproof  
 Legible at up to: 18 m  
 Labelling: two-sided  
 Autonomy: switchable from 3 hours to 8 hours  
 Power source: LiFePO accumulator 3.2 V / 1.6 Ah  
 Temperature range: +5°C to +40°C

# Lighting refurbishment

## Get ready to switch to LEDs: Phase-out of conventional light sources from 2023

The EU has banned the delivery of T5 and T8 fluorescent lamps (among others) and will begin gradually enforcing this ban in 2023.

Regulation / Directive	RoHS 2023-02-25	RoHS 2023-08-25	Ecodesign 2023-09-01	
 <b>Compact fluorescent lamps</b> without integrated ballast				
 <b>Circular fluorescent lamps T5</b>				
 <b>Linear fluorescent lamps T5</b> 14 W, 21 W, 24 W, 28 W, 35 W, 39 W, 49 W, 54 W, 80 W				
 <b>Linear fluorescent lamps T8</b> 18 W, 30 W, 32 W, 36 W, 51 W, 58 W				
<b>Additional lamps</b>				

## Why is a refurbishment project more important now than ever?

- The switch to LED technology is being enforced by law and subsidised by the federal government
- Improved energy efficiency
- CSR – reducing the carbon footprint
- Significantly improved light quality

## The Fluolite service concept: Upgrade to LEDs with Fluolite

Start replacing your conventional lighting systems with LED technology today. Fluolite is ready to assist you at every

step from planning to implementation. We'll make sure your lighting is upgraded quickly and professionally.

We look forward to receiving your enquiry.

### The Fluolite service concept is divided into 3 phases:

#### Phase 1

##### Needs assessment

- Define goals
- Carry out an inventory
- Identify what is missing

#### Phase 2

##### Planning

- Select the required products
- Create a lighting plan based on the chosen products
- Coordinate the lighting solution

#### Phase 3

##### Implementation

- Determine the project costs
- Prepare an amortisation calculation
- Project release
- If applicable, submit a funding application
- Project execution

### Subsidies of up to 15% for LED conversions.

Thanks to the federal subsidies for efficient buildings (BEG), you can obtain financial support for renovation projects that will permanently reduce the building's energy costs and help to protect the climate.

Learn more about this from page 110

# Lighting refurbishment

## LED upgrades for buildings: Federal funding programme for greater efficiency and sustainability

### Funded measures:

#### Energy-efficient lighting systems

##### Indoor lighting systems

- with high system luminous efficacy
  - Indoor luminaires with at least 120 Lm/W
  - Trunking-mounted LED luminaires with at least 140 Lm/W
- with consistently high luminous flux (> L80 | 50,000 operating hours)
- Complete luminaire replacement (not just individual components)

##### Including

- Ancillary work (e.g. dismantling, assembly)
- Components
- Creation of a lighting concept

Lamps that are not permanently installed (e.g. retrofit, replacement lamps) are not eligible.

### Eligibility requirements

- The existing lighting installation is older than 5 years
- After implementation of the measure, continued use for at least 10 years must be ensured
- Involvement of an external energy efficiency expert
  - Support with energy planning
  - Preparation of a technical project description for the chosen measure
    - Preparation of technical project verification after completion of the measure
- Investment volume of at least € 2,000 (net)

### Eligible applicants:

#### Who is eligible?

- **Private individuals** and homeowners' associations
- **Freelance professionals**
- **Municipal regional authorities**, municipal associations and administration unions as well as legally dependent proprietary enterprises run by municipal regional authorities
- **Non-profit organisations** including churches
- **Companies**, including sole traders and municipal companies
- **Other legal entities** under private law including housing cooperatives
- **Property owners, tenants, leaseholders**

Funding applications must be submitted before the refurbishment project starts.

### Duration of the funding programme / funding amounts

- The funding programme began on 1 January 2021 and will run until 31 December 2030
- Implementation within 24 months after notification of funding (= approval period)
- Eligible investments max. € 1,000 per sqm and year, up to a max. total of € 5 million per year
- Funding rates (grant): 15% for individual measures and 50% for the application and construction supervision
- The funding programme is not subject to the EU rules on state aid

## Subsidised Fluolite luminaire families:

### Luminaires with a higher protection grade

PAC-D EL ML	12 – 14
PAC-D EL Q	15
PAC-D HP	16
LZP	17

### Luminaires for special applications

PAC-D AI	22 – 23
LZP HT	24 – 25

### Surface-mounted luminaires

AOT	30
AOT Mini	31
Euro-Line	32
Euro-Line Mini	33
DeSpl	34
LUX ML   LUX	36 – 37

### Wall and ceiling luminaires

Please check each individual product you wish to purchase to see if it is eligible.

Learn more about the BEG funding guidelines:

# Chemical resistance

This table provides an overview of the chemical resistance of the key materials used in luminaire construction. Subsequent problems and complaints can often be pre-empted by referring to this information. The type and composition of the chemical substances can cause the materials of the luminaires to deteriorate at different temperature ranges.

Example applications where material deterioration may occur:

- Food processing industry, kitchens, meat processing areas, cheese factories, dairies (also due to the cleaning agents used here).
- In areas where oils, greases and lubricants or chlorine vapours occur more frequently or direct contact with these substances is possible – diffusers made of PMMA in conjunction with V2A closures should be used.

The information on chemical resistance refers to an ambient temperature of approx. 22 °C.

**Please note that high-pressure cleaners must not be used.**

**When cleaning the diffusers/housings, we recommend using a weak solution of the appropriate agents.**

**The use of chemical cleaning agents is possible to a limited extent, however please consult us first.**

- Resistant
- Limited resistance
- ✗ Not resistant
- Not tested

# Technical information – HF sensor

## Connection diagram master/slave

Maximum switching capacity = 400 VA (Watts)

### Example 1:

RKL 2 LED with 12 watts each:  
 1 x luminaire with HF sensor & max. 32 x RKL 2 LED On/Off  
 2 x luminaire with HF sensor & max. 31 x RKL 2 LED On/Off

### Example 2:

RKL 4 LED with 37 watts each:  
 1 x luminaire with HF sensor & max. 9 x RKL 4 LED On/Off  
 2 x luminaire with HF sensor & max. 8 x RKL 4 LED On/Off

### Detection zone

**1 – 9 metres, depending on installation type (wall or ceiling)**

The detection zone can be narrowed down by selecting the combination with the DIP switches.

### Time cycle

**5 seconds – 30 minutes**

When a movement is detected, the time cycle can be selected by configuring the DIP switches. This function is deactivated when there is sufficient daylight.

### Twilight threshold

**2 Lux – 50 Lux**

To prevent unnecessary activation of the lights when there is sufficient daylight, the threshold value for the residual light detection can be set.

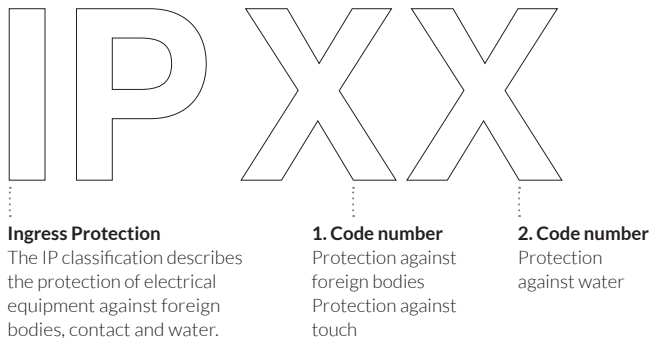

Precautions for product installation and commissioning for luminaires with HF motion sensors are available at:  
[www.fluolite.de/download](http://www.fluolite.de/download)

# IP protection grades

Luminaires and other electrical equipment must not pose a hazard under any circumstances. Therefore, they must undergo certain tests depending on the requirements and intended use. In this way, safe operation is guaranteed over the entire lifetime of the product. By means of the IP protection grade and protection class, the requirements are defined in detail on the basis of various standards.

## What is the protection grade?

The protection grade defines the suitability of electrical equipment for certain environmental conditions. Depending on the classification, the unit must be protected to a greater or lesser degree against the ingress of moisture and other foreign bodies. The impact resistance is also determined by the protection grade.

## What does the IP protection grade mean?

The abbreviation **IP** stands for **International Protection**. It is also commonly referred to as “ingress protection”, which means protection against penetration by external elements. Next to the IP abbreviation there are **two code numbers** which define the exact classification of the protection grade. These code numbers are defined in the German standard **DIN EN 60529** and the international standard **ISO 20653**. Compliance with the protection grade is the responsibility of both the installer during installation and the operator during the service life of the lighting installation.

First code number	Protection against foreign bodies and touch	Second code number	Protection against water (liquids)
IP 0X	No protection against foreign bodies, no protection against touch.	IP X0	No protection against water.
IP 1X	Protection against foreign bodies with $\varnothing \geq 50$ mm; protection against extensive contact with the hand.	IP X1	Protection against vertically falling drops of water.
IP 2X	Protection against foreign bodies with $\varnothing \geq 12$ mm; protection against touching with the finger.	IP X2	Protection against drops of water falling diagonally at up to 15°.
IP 3X	Protection against foreign bodies with $\varnothing \geq 2.5$ mm; protection against contact with tools or wire.	IP X3	Protection against drops of water falling diagonally at up to 60°.
IP 4X	Protection against foreign bodies with $\varnothing \geq 1.0$ mm; protection against contact with tools or wire.	IP X4	Protection against splashing water from all directions.
IP 5X	Protection against internal dust deposits; complete protection against touch	IP X5	Protection against jets of water from any direction.
IP 6X	Dust-proof; complete protection against touch.	IP X6	Protection against strong jets of water.

## Protection classes

The protection class indicates which protective measures are necessary against direct or indirect contact. A distinction is made between protection classes I and II.

### ⚡ Protection class 1 (I)

In **protection class I**, the protection goal is achieved by insulating live parts (so-called “basic insulation”) and by connecting conductive exposed metal parts to the **earth conductor**.

### □ Protection class 2 (II).

In equipment that complies with **protection class II**, live parts are covered with **protective insulation** in addition to the basic insulation. An earth-conductor connection is not necessary. System-specific protective measures are not necessary.

## Certification marks

Only luminaires with a limited surface temperature may be used in operating sites where a fire hazard exists. In premises where a fire hazard exists due to dust and/or fibres, the luminaires must also be designed to prevent the dust and fibres from accumulating on them in dangerous quantities. In such areas, luminaires with the symbol are guaranteed to meet the requirements for a limited surface temperature. Luminaires marked with the symbol are suitable for rooms with an elevated fire risk. To limit their surface temperature, they are equipped with suitable lamps and gear.

The -marking is the responsibility of the manufacturer. In doing so, the latter confirms that the product conforms to the respective EC or EU Directives. Conformity with the Low Voltage Directive and the EMC Directive (immunity to interference, emitted interference) is a prerequisite for the -marking of our luminaires.

# IK impact resistance grade

The IK impact resistance grade indicates the design-related protection of a housing against strong mechanical impacts and shock stress. The European standard IEC 62262 lists

10 protection grades for impact resistance. It regulates the minimum impact energy in joules (J) that the housing must be able to withstand in order to ensure continued safe operation.

IK number	Impact resistance (joules)	Protection against	Distance	Luminaires	Page
<b>IK 00</b>	No protection	Not tested		–

# Sustainable products from Fluolite

Help us play our part in protecting the environment.  
With the NEW FLUOLITE, you have the right partner at your side.

Our actions are increasingly determined by the need to make ever more efficient use of existing resources. We proactively address the resulting continuous ecological, legal and societal changes.

In the European Union, a package of measures was adopted in the form of the Ecodesign Directive, which, among other things, contains mandatory specifications for the energy efficiency of luminaire components and serves as a reference point with regard to conserving resources and reducing CO<sub>2</sub> emissions.

For our company, this provides the foundation for a product portfolio that is in step with the market and the times, both today and in the future. We have been producing "Made in Germany" luminaires since the 1950s.

Our premium, long-lasting FLUOLITE luminaires are based on our strict quality standards for materials, workmanship, technology and service. Efficient delivery channels, optimised and resource-saving production processes, and interchangeable lighting technology are all cornerstones of our strategy.

- ▶ **Manufactured in Germany in accordance with ISO 9001 and ISO 14001 (environmental management system)**
- ▶ **Efficient delivery and procurement channels**
- ▶ **In-house recycling: returning waste materials to the production cycle**
- ▶ **Use of green electricity**
- ▶ **Sustainability through replaceable LED modules**

# LED luminaire warranty

## THE FLUOLITE QUALITY PLEDGE

### Quality lighting – reflected by our warranty

Premium materials, precise workmanship and reliable partners – these are what make our products so dependable. Furthermore, we consistently adhere to the highest standards – we manufacture and test our products in accordance with the European standard DIN EN 60598 (VDE).

Our free luminaire warranty is based on our total confidence in our luminaire systems and gear. When you purchase a Fluolite product, we guarantee its quality and flawless performance under the terms of the warranty for a period of three or five years, based on the number of operating hours.

### Five-year luminaire warranty

Our luminaires with a rated life expectancy of  $\geq 50,000$  operating hours come with a five-year warranty.

### Three-year luminaire warranty

We provide a warranty of up to three years for luminaires with a rated life expectancy of  $< 50,000$  operating hours.

The warranty period starts from the date of invoice. Warranty claims must be submitted immediately after the occurrence of the defect along with our invoice as proof of purchase. The warranty is valid throughout Europe for all LED modules, LED gear and other LED components of our luminaires.

#### Our warranty is subject to the following terms and conditions:

Our warranty only covers failures due to material, design and manufacturing defects, as well as failures that exceed the rated failure rate of 0.2 % per 1,000 operating hours.

The average rate of decrease in luminous flux of LED modules occurs due to technical reasons up to a value of 0.6 % per 1,000 operating hours, and is therefore not covered by the warranty. As a result of technical advancements, deviations in light characteristics may occur when LED modules are replaced.

Moreover, the validity of any warranty claims is dependent on the fact that

- ❶ our luminaires are used as intended and the technical limit values are complied with;
- ❷ no modifications are made to our luminaires;
- ❸ their installation and maintenance is carried out by qualified personnel in accordance with the installation and maintenance instructions.

#### Our warranty includes the following services:

Our warranty extends to repair, replacement or crediting of the purchase price at our discretion. In the event of a replacement delivery, we shall be authorised to deliver a replacement product that deviates from the original due to technical advancements.

Any costs associated with the installation and removal of the defective product or the replacement product, as well as the costs of scaffolding and lifting platforms, transport, shipping and disposal are not covered under our warranty. We are also not liable for any other damage resulting from the failure of the luminaires.

The performance of a warranty service does not result in an extension of the warranty period.

The customer's statutory warranty rights shall remain unaffected. In all other respects, our general terms and conditions of sale shall apply.

Technical notes:

Special technical features, such as DALI versions, emergency lighting, HF sensors, etc. are available on request for almost every luminaire type.

We can also manufacture special luminaires based on your requirements or specifications.

Technical data as well as EPREL information can be found on the data sheets for each luminaire and on our website at [www.fluolite.de](http://www.fluolite.de).

Our luminaires comply with European technical standards and are CE-certified.

LED technology is subject to continuous advancements. The stated efficiency values reflect the state of the art at the time of printing. Continuously updated values are available on our website.
